

Samba 4 – вход на шары без пароля

```
cd /usr/ports/net/samba44/  
make install clean
```

Я выбрал только SYSLOG – Syslog logging support.

Конф файл *smb4.conf* находится/создается по пути

/usr/local/etc/

В нем прописываем такие настройки:

```
[global]  
workgroup = ASUS  
server string = tst home samba server  
security = user  
map to guest = bad password  
guest ok = yes  
load printers = no  
# log file = /var/log/samba4/log.%m  
vfs object = full_audit  
full_audit:prefix = %u|%I  
full_audit:failure = none  
full_audit:success = mkdir rmdir open read close pread write  
pwrite sendfile rename unlink lock  
full_audit:facility = local5  
full_audit:priority = notice  
netbios name = tst  
max log size = 50  
interfaces = lo, alc0  
bind interfaces only = true  
dns proxy = no  
#display charset = koi8-r  
unix charset = koi8-r  
dos charset = cp866
```

```
[share]  
comment = Films and Music
```

```
path = /home/share
public = yes
browseable = yes
writable = yes
guest ok = yes
read only = no
#write list = @wheel
```

```
[data]
comment = Films and Soft
public = yes
writable = yes
path = /home/data
read only = No
guest ok = Yes
browseable = Yes
```

```
[homes]
comment = Home Directories
browseable = no
read only = no
```

Дописываем:

```
echo 'samba_server_enable="YES"' >> /etc/rc.conf
```

Запускаем

```
# service samba-server start
```

Пробуем войти

```
192.168.1.41/data
192.168.1.41/share
```
