

Рора3d – простой POP3 сервер

```
portsnap fetch && portsnap update
cd /usr/ports/mail/popa3d/
make install clean
```

1. Edit your /etc/inetd.conf to use popa3d. The line should look like this:

```
pop3 stream tcp nowait root /usr/local/libexec/popa3d popa3d
```

Note: when started via an inetd clone, the logging of connections is left up to that inetd clone or TCP wrappers.

2. Reload inetd

```
# /etc/rc.d/inetd reload
```

Или

```
echo 'popa3d_enable="YES"' >> /etc/rc.conf
```

```
/usr/local/etc/rc.d/popa3d start
```

```
netstat -an | grep 110
```

```
tcp4 0 0 *.110 *.* LISTEN
```
