

# postfix — спам вида: user@domain.com → user@domain.com

В последнее время замучил спам вида: user@domain.com → user@domain.com, т.е. спам, якобы, от себя — себе же.

Правим, добавляя выделенное:

```
# ee /usr/local/etc/postfix/main.cf
.....
# Аутентификация SMTP
smtpd_sasl_auth_enable = yes
smtpd_sasl_exceptions_networks = $mynetworks
smtpd_sasl_security_options = noanonymous
broken_sasl_auth_clients = yes
smtpd_sasl_type = dovecot
smtpd_sasl_path = private/auth

# SPAM user@domen.com --> user@domen.com
smtpd_restriction_classes = OnlyFromMyUsers

OnlyFromMyUsers = permit_mynetworks
                  permit_sasl_authenticated
                  reject
*** END SPAM *** access_sender ***

smtpd_client_restrictions =
    permit_mynetworks
    permit_sasl_authenticated
    reject_unauth_pipelining
    permit
....

# Ограничения по отправителю
smtpd_sender_restrictions =
    check_sender_access hash:/usr/local/etc/postfix/access_sender
    check_sender_access hash:/usr/local/etc/postfix/blacklist
```

```
permit_mynetworks
permit_sasl_authenticated
check_sender_access hash:/usr/local/etc/postfix/whitelist
reject_non_fqdn_sender
reject_unknown_sender_domain
permit
```

....

```
# cat access_sender
domain.com OnlyFromMyUsers
```

Перезапускаем сервис:

```
# service postfix restart
```
